HARRISON DENTAL STUDIO, INC.

## LET'S TALK STUMP SHADES

The STUMP SHADE or Dentin Shade (the shade of the prepped tooth) is a critical factor in getting the final restoration shade perfected. The actual stump shade can cause variations in the final result, which creates extra clinical visits for your patients. By providing a dentin shade, this allows our technicians to determine the proper shade. You will see a great result when the restoration is in the mouth. This small extra step will be well worth it!

## SEE THE DIFFERENCE

Tooth #8 is an example of a tooth with a dark stump shade and Tooth #9 is an example of a tooth with a normal stump shade. What a difference! Dentin shades are so important.

*Remember, you can never send us too much!*
